## “Hannoveraner dam line“ now available in english

### New Service of the Hannoveraner Verband

Verden. The Hannoveraner Verband has published its dam line information system “Hannoveraner Stutenstamm“ (“Hannoveraner Dam Line“) on the Internet last year. A huge number of information and data on the Hanoverian breed can be recalled online with this unique system. Now it is available in english.

Hanover’s mare basis has an excellent reputation all over the world. The dam lines are highly efficient, well-bred, have been selected over generations for the desired qualities for production of riding horses, and many of them have been fostered by committed breeders’ families for more than hundred years. The Hannoveraner Verband has now launched a dam line information system. More than 1,500 dam lines have been identified and have been marked with a special description.

„Hannoveraner Dam Lines“ provides every breeder and horsemen the possibility to obtain detailed information on each registered Hanoverian dam line. There will be information on the origin of each foundation stock (foundation mare, breeding site), its distribution (quantity of registered brood mares in total and at present), number of state premium mares, numbers of stallions licensed in Hanover including their name and pedigree link, quantity of auction horses, successes in sport including a list of all extraordinary Hanoverian sport horses.

The english version “Hannoveraner dam line“ is available on our website [www.hannoveraner.com](http://www.hannoveraner.com). Fees will be charged for this service. Members of the Hannoveraner Verband will be granted a discount. For information and registration, please click on [www.hannoveraner.com](http://www.hannoveraner.com)
